

Musical Intelligence

Music smart: understand musical structure and composition, and communicate by writing or playing music, has to do with rhythm, music, and hearing. Those who have a high level of musical-rhythmic intelligence display greater sensitivity to sounds, rhythms, tones, and music. They normally have good pitch and may even have absolute pitch. Language skills are typically highly developed in those whose base intelligence is musical.

Possible opportunities

Composers, pianists, conductors, instrumentalists, singers, disc-jockeys, orators, writers

You Are a Musical Learner

Your mantra: That sounds good to me!

You probably sing to yourself while walking down the street. Keep it up! Musical intelligence is associated with enjoying music, singing (vocalists), making music (composers), and playing an instrument (instrumentalists). You are sensitive to sounds and the emotions music conveys. You have a unique ability to know when something is off key.

Tips for the way you learn:

- Listen to music while you study to connect its patterns and sounds with the subject you are studying. Replay the same song just before a test.
- Create a rhyme, song, or chant for material you would like to memorize.
- Associate what you're learning with a song you like.
- Use your ability to distinguish sounds as well as hear the beat, tone, or chord in a song by learning an instrument or mixing sound.

"Jones sound, and roar and storm about me until I have set them down in notes."

Ludwig van Beethoven
