

Spatial Intelligence

Picture smart: receive the world in visual terms, notice and remember visual details, and can recreate things after seeing them, ability to visualize with the mind's eye.

Possible opportunities

Artists, sculptors, graphic designers

You Are a Visual-Spatial Learner

Your mantra: What you see is what you get.

Visual-spatial intelligence allows you to see and modify things in your mind. With an understanding of the visual world and its relation to physical items, you are good at solving spatial problems, designing, and doing crafts. Interior designers have remarkable spatial abilities, as do painters.

Tips for the way you learn:

- Use art projects to create representations of the content you are learning.
- Draw related images next to your notes (along with arrows between ideas) to create connection and reference points.
- Organize with color. Use different-colored highlighters, paper, index cards, folders, or tabs to create a visual system for finding things and grouping topics.
- Visualize your topic. When you are learning something new, imagine what it looks like.

“Art is never finished, only abandoned.”
Leonardo da Vinci
